

MooreEngage Mapping Tool

Mapping Public Input

MooreEngage is an interactive, GIS-based mapping tool that allows the public or key stakeholders to leave comments tied to specific project locations. It gives communities a simple way to point out problems, share ideas, and help shape designs.

Public engagement is essential to building infrastructure that reflects the real needs of the communities we serve. MooreEngage supports this by:

- Collecting location-specific feedback
- Visualizing community priorities
- Reaching people who may not attend meetings
- Building transparency and trust

ADVANTAGES

Map What Matters

MooreEngage helps project teams collect high-impact feedback with geographic precision. Quickly identify patterns, hot spots, or recurring concerns to guide smarter design and planning decisions.

Connect Anytime, Anywhere

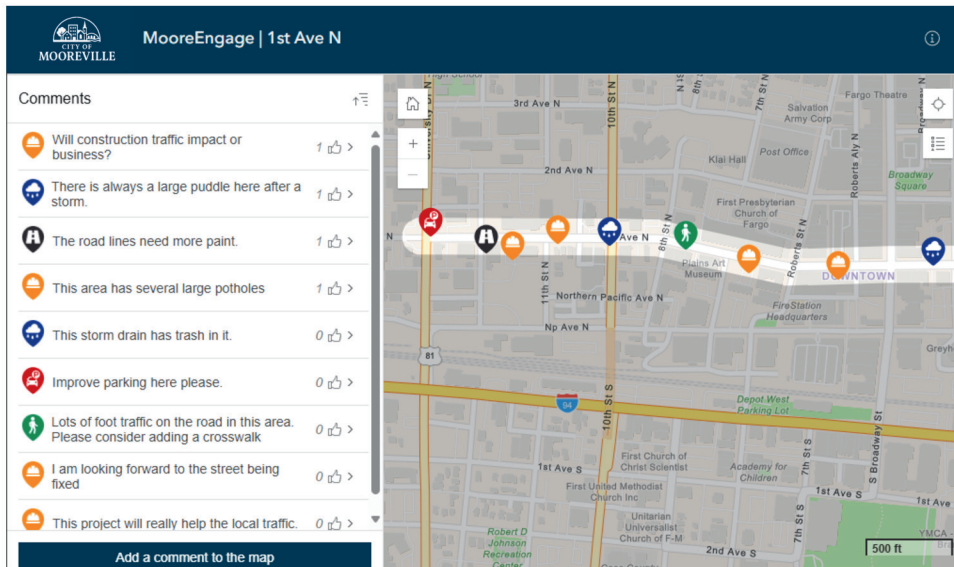

Designed for use on phones, tablets, and computers, MooreEngage makes it easy for residents to participate on their own time, wherever they are.

Engage More, Guess Less

From drainage issues to trail alignments, MooreEngage surfaces real-world observations that might otherwise go unheard.

Deliver with Confidence

Use feedback summaries to support grant applications, guide design iterations, or present insights to clients and councils.

This is an example of MooreEngage to show how the tool can collect location-based public input on issues such as cracks or parking, to guide project planning.

WHEN TO USE MOOREENGAGE

MooreEngage is ideal for projects that benefit from localized, visual feedback, especially when public input plays a critical role early in the process. Consider it for:

- Street or corridor reconstruction
- Park and trail planning
- Utility upgrades and infrastructure studies
- Safe Routes to School planning
- CIP planning
- Flood mitigation or stormwater projects
- Redevelopment studies

GETTING STARTED

Contact us today to get started! We will work with our engagement experts and GIS team to tailor the map for your project, audience, and timeline.
